Contract Furnishings Mart

## CABINETRY

## How to Measure

1. Sketch Room Shape. Start with the overall room shape (square, rectangle) and draw in all the appropriate obstacles such as doors, windows, or structural elements that will not be moved.
2. Measure. Working out from the corner, work one wall at a time. Most people find it easiest to start with the longest measurement on the wall, notate it, and then measure the distance from the corner to the obstruction such as a window, notate it, and then measure the obstruction and mark that down.
3. Rounding. Although, we want the measurements to be as accurate as possible - rounding up to the nearest quarter inch is acceptable. We can double check prior to the final order.
4. Layout. Mark the location (or desired location if moving) of your kitchen components, such as the sink, oven and or cooktop, refrigerator, and any other significant appliances.
5. Ceiling height. Don't forget to include the height of your ceiling with your measurements. This is critical in determining what size upper cabinets will be best for your space.
6. Take pictures! They help us get a better feel for your space and identify any potential mismeasurements.
